

Employee Performance Appraisal System Flow

End-to-end workflow for the Laravel + React + Inertia appraisal module, from setup and employee assignment through final approval, finalization, reporting, Excel export, and PDF output.

Generated documentation source for the current implemented MVP workflow.

SYSTEM FLOW DIAGRAM

Foundation Appraisal Workflow Outputs Setup Masters Departments, Job Titles, Perspectives, Competencies, Rating Scales, Templates, Goals Access Control Users, Roles, Permissions Spatie permission model Employee Profiles User link, employee number, department, job title, line manager, approving manager, HR profile data Review Cycles Create, open, close cycles with goal and review deadlines Cycle Assignment Assign template + employee Create one appraisal per employee per review cycle

1. Goal Planning SMART objectives and weights must total 100 for business goals
2. Self Assessment Performance achieved, self ratings, comments, evidence
3. Manager Review Manager ratings, competency ratings, comments, forward or send back
4. Final Approval Approving manager approves or sends back for correction
5. Finalization HR finalizes approved appraisals and locks final result

Reports and Documents Dashboard, cycle summary, department summary, employee summary, Excel export, print view, final PDF Audit and Notifications Status history, approvals, comments, workflow notifications

send back send back Scoring Model Business score = weighted manager objective ratings Values score = average manager competency ratings | Overall = template split (default 80/20)

STATUS PATH

Assignment rule An employee cannot be assigned to a review cycle unless an approving manager is present on the employee profile.	Goal-setting rule Business objectives that count toward the score must total exactly 100 before the goal plan can be submitted.	Approval rule Final approval calculates and stores business score, values score, overall score, and the mapped rating level.
